DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group II in the reply filed on August 4, 2006 is acknowledged.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 7-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not disclose how to cyclically control the switch to and from conducting state to increase the output voltage of the fuel cell units. It is unclear as to how a switch connecting the fuel cell units to the intermediate storages increases the output voltage of

Art Unit: 1745

the fuel cell units. It appears as though the switch regulates the amount of voltage to the intermediate storages, but does not control the output of the fuel cell. The prior art, such as Shioya U.S. Pub. 2002/0081468, teaches fuel cell units connected to an intermediate storage, such as a capacitor, through a controllable switch. However, the reference does not teach or suggest controlling the controllable switches cyclically to and from conducting state to increase the output voltage of the fuel cell. The reference has not been applied because there is lack of enablement to perform this step.
